

CS2001 Level 2 Group Project

Deliverable 4 – Portfolio Draft

DELIVERABLE DETAILS

This deliverable aims to make you start reflecting on your project group work and your involvement in the group activity to date and evaluate how you can achieve the learning outcomes for CS2001 to pass the module. This is a formative assessment.

For the final graded individual assessment, we expect you have built a portfolio of evidence of how you have contributed to your CS2001 project group and, in doing so, how you have demonstrated the learning outcomes for the module. In this deliverable, you will do a mid-year evaluation of how you have:

1. Contributed to continuous deliverables set out in the study guide
2. Made continuous individual contributions to the group work

Use “CS2001 Individual Portfolio Draft Template for Deliverable T4” for the Portfolio Draft. Using this template:

1. Draft your “Project Idea” section (which will be part of your final project portfolio)
2. Fill the Term 1 – Deliverables Summary (your final project portfolio will have this section covering both terms)
3. Explain the project management and development plans to date.
4. Reflect on your development and group work and what can be improved, if needed.
5. Fill in the table for Expected Performance against learning outcomes, and make sure your plans allow you to at least pass the module and achieve higher grades.

FORMAT OF THE ASSESSMENT

A template Word Document is provided on Brightspace, which you should use as a basis. Please follow the structure but remember to remove the comments and scaffolding text and personalise it to your name and id. This report is expected to be 1000-1500 words long; it is essential to be concise and business-like and avoid verbosity.

When using figures, use captions to describe them, and in the main text, explain what purpose the figure serves in your portfolio. Avoid putting a lot of diagrams or code listing uncommented, leaving it up to the reader to discern their significance.

SUBMISSION OF THIS DELIVERABLE

You must submit your coursework as a PDF file on Wiseflow as an individual submission by 09/12/2022 at 11 am. The name of your file should follow the standard convention set out in the student handbook and include your student ID number (e.g., 0612345.pdf). It can also have the module code (e.g., CS2001_0612345.pdf).
